

TYPE 5620/5620P

DUAL O-RING SEALS

Technical Specification

- A – Face/Primary Ring
- B – Seat/Mating Ring
- C – Secondary O-ring
- D – Nonclogging Wave Spring
- E – Sleeve
- F – Gland

Product Description

The 5600 Series is a modular cartridge seal family that includes interchangeable elastomer bellows, metal bellows, and elastomer O-ring pusher seal designs.

- Dual seal arrangements incorporate an elastomer O-ring as the dynamic secondary sealing member.
- Primary and mating ring reverse balance designs allow for ID or OD pressurization, which permits the dual seal to operate as a tandem or double.
- OD pressurization of the outboard seal avoids subjecting components to high tensile stresses and achieves improved cooling. On vertical installations, it allows venting of entrapped air.

Design Features

- Reversible seal head
- Nonclogging wave spring outside the product
- Fits ANSI B73.1M and ISO 3069 seal chambers
- Optimized primary ring design for greater reliability
- Setscrewless outboard seal drive
- Tangential inlet and outlet pipe connections below 3.000"/75mm.

Performance Capabilities

- Temperature: -20°F to 400°F/-30°C to 205°C
- Pressure: up to 3.000"/75mm: 300 psi(g)/21 bar(g)
3.000"/75mm and over: 200 psi(g)/13 bar(g) max.
- Speed: up to 5000fpm/25m/s
- End play/axial float allowance: 0.005"/0.13mm
- Runout/out of squareness: 0.002"/0.05mm

TYPE 5620/5620P

DUAL O-RING SEALS

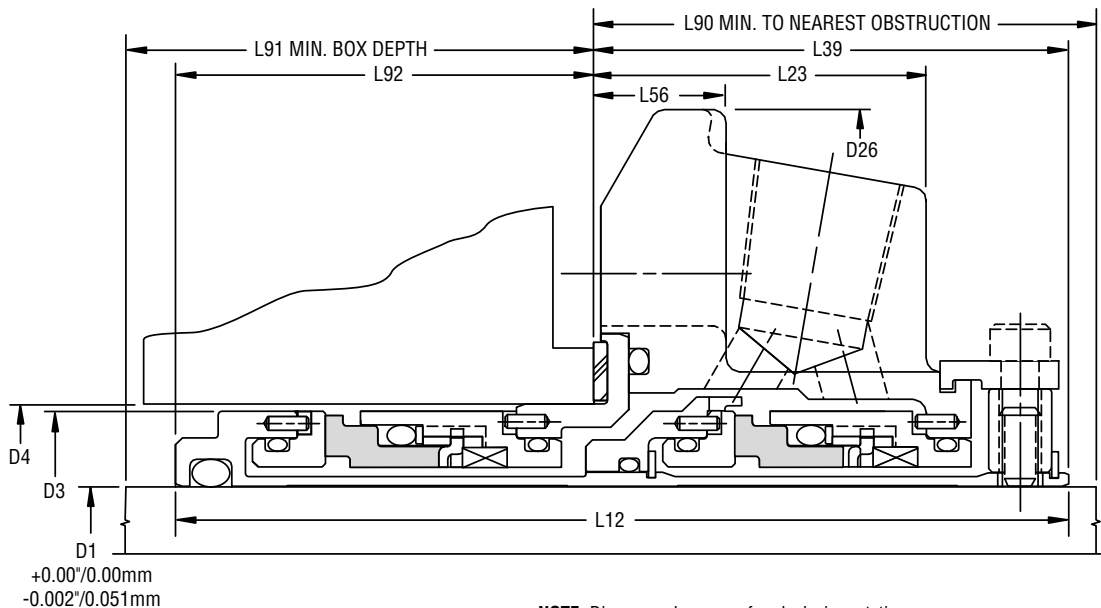

Type 5620 Typical Arrangement

PIPING	
Self Venting	#1 Outlet #2 Plugged
Optional Tangential	#1 Vent #4 Outlet Outlet

NOTE:
Direction of view is from the driver end of pump. Gland can be rotated to fit both ISO and ANSI pump type.

Type 5620P Typical Arrangement

NOTE: Diagrams shown are for clockwise rotation.
For counter-clockwise shaft rotation, consult John Crane.

*Not applicable. Refer to L23 for sizes over 75mm.

TYPE 5620/5620P

DUAL O-RING SEALS

Maximum Pressure Limits

Tandem Type 5620*	Double Type 5620*	
Process Pressure	Barrier Fluid Pressure**	Inboard Seal Internal Pressure Rating***
Up to 3.000"/75mm: 300 psi(g)/21 bar(g) Over 3.000"/75mm: 200 psi(g)/13 bar(g)	300 psi(g)/ 21 bar(g)	20-50 psi(g)/2-4 bar(g) (Norm.) 300 psi(g)/21 bar(g) (Max.)

* Barrier fluid pressure relative to seal chamber pressure (API Plan 52 or 53) determines usage of the cartridge. As a tandem, the buffer pressure is lower than process pressure; or as a double, the barrier pressure is higher than process fluid pressure to be sealed.

** John Crane recommends barrier fluids having a viscosity less than 14cSt/65 SSU and fluid lubricity that is equal to or better than water at 100°F/38°C.

*** Inboard seal (process side) internal pressure rating is defined as the barrier fluid pressure minus the seal chamber throat pressure.

Basic Pressure Rating

The basic pressure rating is for a standard seal, as shown in the typical arrangement, when installed according to the criteria given in this data sheet and generally accepted industrial practices.

The basic pressure rating assumes stable operation at the speed indicated in a clean, cool, lubricating, nonvolatile liquid with an adequate flush rate. When used with the multiplier factors, the basic pressure rating can be adjusted to provide a conservative estimate of the dynamic pressure rating. For process services outside this range or a more accurate assessment of the dynamic pressure rating, contact John Crane for more information.

Multiplier Factors

	Selection Considerations	Multiplier Factor
Sealed Fluid Lubricity <small>(applies to Silicon Carbide vs. Silicon Carbide only)</small>	Petrol/Gasoline, Kerosene, or Better Water and Aqueous Solutions Flashing Hydrocarbons* (Specific Gravity ≤ 0.65 etc.)	x 1.00 x 0.75 x 0.60
Sealed Fluid Temperature <small>For Carbon Only</small>	Up to 175°F/80°C From 175°F to 250°F/80°C to 120°C From 250°F to 355°F/120°C to 180°C From 355°F to 445°F/180°C to 230°C	x 1.00 x 0.90 x 0.80 x 0.65

Example for Determining Pressure Rating Limits:

Seal: 2"/50.8mm diameter Type 5620
Operating mode: pressurized dual
Barrier fluid: aqueous solution
Face materials: silicon carbide vs. silicon carbide
Operating temperature: 194°F/90°C
Operating speed: 2950 rpm

Using the pressure rating limits graph, the maximum pressure would be 268 psi(g)/18.5 bar(g).
From the multiplier factors chart, apply the multiplier factors for the specific service requirements:

$$268 \text{ psi(g)/18.5 bar(g)} \times 0.75 = 201 \text{ psi(g)/13.9 bar(g)}$$

The maximum operating pressure for this 2"/50.8mm Type 5620 seal is 201 psi(g)/13.9 bar(g).

*The ratio of sealed pressure to vapor pressure must be greater than 1.5, otherwise consult John Crane. If the specific gravity is less than 0.60, consult John Crane.

Materials of Construction

SEAL COMPONENTS	MATERIALS	
	Description	Standard
Face/Primary Ring	Resin-Impregnated Carbon	Sintered Silicon Carbide Nickel Binder Tungsten Carbide
Seat/Mating Ring	Sintered Silicon Carbide	Nickel Binder Tungsten Carbide
Sleeve Gland Collar Gland Adapter Sleeve Adapter Retainer Drive Ring Anti-Extrusion Ring	316 Stainless Steel	Alloy 20CB3 SS (UNS N8020) Alloy C-276 (UNS N10276) Titanium
Spring	Alloy C-276 (UNS N10276)	—
O-ring	Fluoroelastomer Ethylene Propylene	Perfluoroelastomer Nitrile Neoprene
Gland Gasket	Glass-Filled PTFE	—

Application Criteria

The Type 5620 and 5620P cartridge seals may be customized for specific installations after review and evaluation by John Crane. The following data is needed to evaluate the proposed service:

- Make and Model of equipment
- Shaft or sleeve OD
- Direction of shaft rotation viewed from drive end
- Seal cavity dimensions
- Buffer/Barrier fluid
- Process fluid
 - Specific gravity
 - Box pressure
 - Vapor pressure
 - Temperature
 - Viscosity
- Speed
